

Mediastor

On-site fire resistant storage solutions

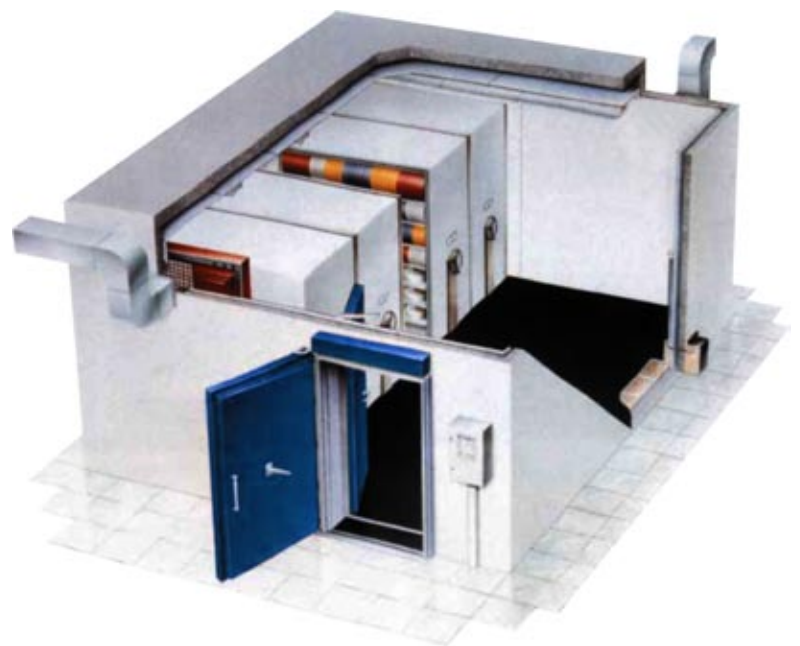

Mediastor is unique. The structure can be constructed within a current building or internally/externally as a standalone on-site walk-in repository for the protection of archival media to BS5454 and BS476. It offers up to 4 hours fire resistance and very high levels of physical security. **Mediastor** is purpose designed and built to meet client's requirements and is assembled on-site.

As **Mediastor** is bespoke for each client it can have unlimited capacity to meet your current and future on-site storage demands.

Supporta Professional Services Document Solutions specialists have the expertise to provide unique on-site storage to protect highly valuable assets and information from the threat of fire, theft, flood, and terrorism. Our on-site solutions range from fire resistant safes and cabinets, to highly secure internal or external vaults and archive structures.

Supporta Professional Services has worked with many of the major global Financial, Pharmaceutical, Nuclear, Clinical Research and Utilities organisations to protect their lifetime records and other assets.

To date, Supporta has installed over 100 secure vault and archive installations throughout the UK. Our solutions are protecting all types of value assets including: documentation, clinical trials, samples, manuals, microfilm/microfiche, videos, currency, and computer media.

Fire Resistant Safes

Our Document Solutions Team are major resellers for the market leading safe manufacturers in the UK.

Bankers Vaults and Cash Safes

Lightweight and heavyweight high security vaults and safes can be installed for the protection of currency and high insurance rated valuables.

Supporta Professional Services Document Solutions team work with the world's leading manufacturers in order to meet the most stringent of standards in this highly sensitive market.

Complementary Off-site Storage

Uniquely, Supporta Professional Services can also offer superior, secure storage facilities to protect your records off-site. We occupy ex-USAF Hardened Aircraft Shelters (HAS) built to NATO standards as secure data archives, accredited to ISO 9001:2000, and using standards such as BS 5454 and ISO 11799 for operational guidelines. We are able to safely store any volume of documents.

The HAS are constructed of concrete over a steel skeleton frame and are over one meter thick. They are fire and flood proof and have no windows to let in natural

light. The storage environment is carefully controlled as environmental data is monitored within the archives using automatic temperature and humidity readers providing an hour by hour account of the inside environment 24 hours a day, seven days a week.

The site is entered by authorised personnel, only via manned security gates, and each archive is fully alarmed with access controlled electronically by programmable key fobs.
